# Deploy and publish content

In this guide, you can learn how to deploy and publish your content in System A.

Pipelines stages

Pipeline stages define content staging workflows in a System A space. This allows to edit content in a space and push it safely from one space to the other. All brand spaces have these stages on their titles.
(ex. Brand –TEST/ACCEPT/PROD).

1 Pipeline stages

1. **Test (Preview):** Where content edits can be made. (https://test.[brand].company.cloud)
2. **Accept (Staging):** Where edits for go live can be checked. (https://accept.[brand].company.cloud)
3. **Production (Live):** Where content will show on the live website. (https://prod.[brand].company.cloud)
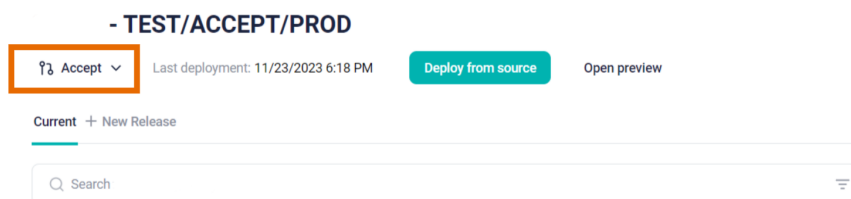

Steps

Before you publish live, you can check your content in the **acceptance environment**.

**1.** Once you published your pages, go to the **Pipelines** tab in the **Content** section.

2 The pipelines tab

**2.** Switch from your **current Preview stage** to **Accept**.

3 Selecting the accept stage

3. Click on "**Deploy from source**" to deploy from preview to accept. A panel window will open.

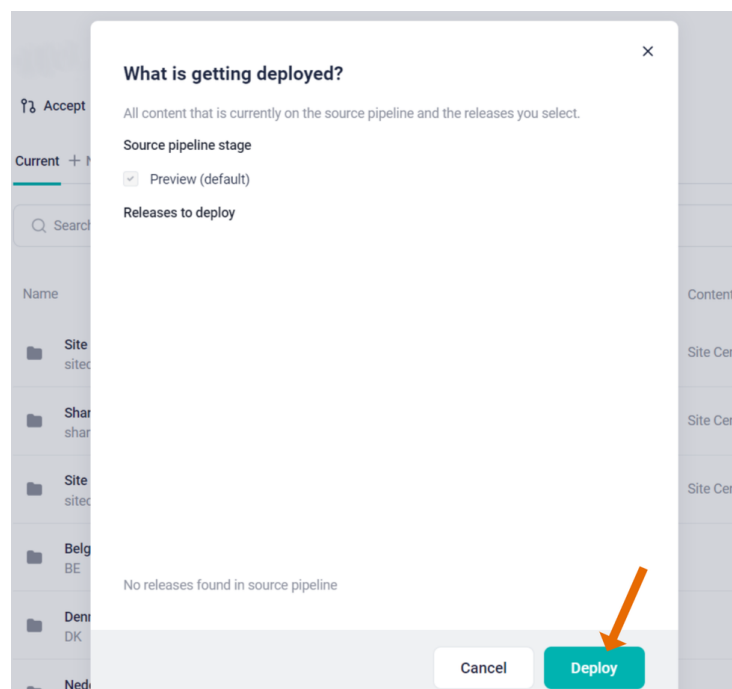

4 Deploying from source

4. Check that you're deploying from the correct source (**Preview**).

⚠ If the pipeline source is **Accept**, it means you're deploying to **Production**.

5 The pipeline stage is correct

5. Click on **Deploy**. The process will take some minutes to finish.

6 Deploying from source

6. Once the deploy is finished, you need to ask development for a frontend build.

Post a message on the **support channel**. The build will take some minutes.

7 Asking for a build in the support channel

7. Once the build is finished, check that your content is correct in the **acceptance environment**.

ⓘ (https://accept.**[brand]**.company.cloud) → replace **[brand]** with your brand name to get the correct link.

8. If the content is correct, you can now deploy to **production**.

Follow the same steps as before.

⚠ Make sure you're deploying from **acceptance** to **production** instead.

Contact and Support

Are you stuck with a step? Do you need more technical help? Check out **how to get digital support** or who to **contact for different topics.**
